

Oil and Gas Well Documents

Permit Well Files

Oil and Gas Permit Well Files are the documents that are generated over the course of the life of a well - from application to plugging. The content of the file depends on the history and activities at the site. Currently the files for permits 1 to 60399 are available as Adobe Acrobat PDFs sorted into the appropriate three digit API county code.

Individual Well Files

If you want a single well file and the permit is lower than 60400 we can email you the file in Adobe Acrobat PDF format. Send your request by [E-Mail](#) and the OOGM will send the file to you.

For records that have not been converted to digital (permits 60400 and above) please make a Freedom of Information Act (FOIA) request for the materials you need. Depending on file size this may involve copying and billing.

FOIA requests should be made in writing to:

FOIA Coordinator
Michigan Department of Environmental Quality
P.O. Box 30457
Lansing, MI 48909-7957

OR

[E-Mail](#)

If you have questions, comments, or suggestions please contact Ms. Deana Lawrence at [E-Mail](#).

Raster Logs

The OOGM has converted paper wire-line logs to digital files. The resulting digital files are called Raster Logs (digital 'Raster' files of the geophysical 'Logs'). The files, in various formats primarily as TIFs, are sorted into the appropriate three digit API county code.

Drillers Logs

Oil and Gas Drillers' Logs are the formation description and formation top pick in an 8.5 by 11 inch format. The files are available as Adobe Acrobat PDFs sorted into the appropriate three digit API county code.
